SMART TEXTILES

A cloth that integrates technologies within it.

At Bilio I developed knowledge about and shared skills related to programmable embroidery methods.

MAMOI'S WORLD

Conceptualized at the start of the pandemic, “Mamoi’s World” is a living project. Inspired by ideas of my cat’s pandemic experience I transformed my drawings into a series of mediums that draw from each other. From the software Blender to Unity these explorations are tranlaste medium exploration. It asks the question how do we perceive “augmentation” of the environment around us in technology?

Inspiration sketches and image marker

BEFORE

and

AFTER

A living project, initial explorations were done in the 3D rendering software Blender in 2019.

Continued in 2021, the source sketches were made into an image marker, with the original objects inspiring the environment.

PLACENTA

This project was based around silicone's material properties. In alignment with the prompt "resistance and resilience" we looked to answer the following questions. What if the placenta was an "permanent" organ? What would the world that it exists in be like?

MATERIAL EXPLORATION

Using silicon as the primary material we did a series of material testing of embedding different materials within silicon to capture and augment this material's natural properties. From conductive yarn, to polyester tubing we mixed different thermochromatic powders to create a baseline of different cosmetic finishes to select from in making our final product.

OBSOLETE ORGANS

- appendix

organs (packable)
 - uncomfortable
 - rigid machine organs

- piece of muscle tissue (joints)
 - highlight connections?

SKETCHES

TRASH POTENTIAL

• placenta = pump
 • thing circulating through pipes

different types of nutrients

- materials → materials

• rock placenta?

multi-chamber

placenta is a cushion
 → mattress

↳ is a sacred vessel

the vein is the tube
 - rests on top of pump?
 - how to circulate air

ITERATIONS

Using silicon as the primary material we did a series of material testing of embedding different materials within silicon to capture and augment this material's natural properties. From conductive yarn, to polyester tubing we mixed thermochromatic powders to create a baseline of different cosmetic finishes to select from in making our final product.

Form development (not to scale). Right (most completed iteration) to left (beginning stages).

TO INDULGE A CHILD

MDes Thesis
"Amaeru"

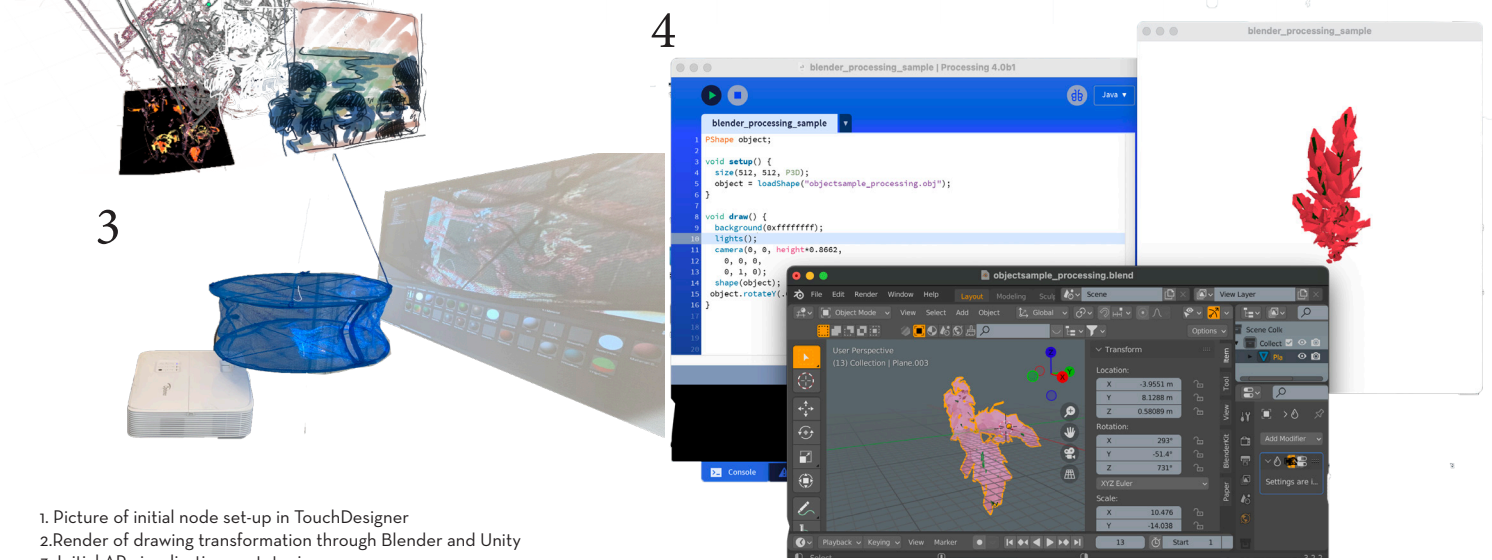

Inspired by the Japanese myth, “Kitsune no Yomeiri”, “To Indulge a Child” draws on traditional visual storytelling. Drawing on the communal phenomena of named generations and Japanese folklore it combines textile embroidery and projected AR to narrate these experiences.

Composed of a wooden frame wrapped in embroidered textiles, three tapestry lamps sit near each other. On top is a smart textile that controls the projected AR environment. Only when viewers stand among all three will they see the complete AR environment. Each lamp stands for a different generation - each color represents their own unique experience of cultural dissonance.

Textile
and
AR

1. Picture of initial node set-up in TouchDesigner
 2. Render of drawing transformation through Blender and Unity
 3. Initial AR visualization prototyping
 4. Sampling Blender objects in Processing

PROCESS

1. Initial sketch of potential form for lantern tapestry
 2. Small initial prototype
 3. Wooden frame of lamp at scale
 4. Frame covered with paper mockup of embroideries
 5. Covered lamp in final product with mockup of projection
 6. All three lamps with final fabric and panels

EXPERIENCE

Bilio

Berkeley, CA

Textile and Material Innovation Intern

Summer 2022

Designed conductive embroidery on the ZSK embroidery machine

Formulated and implemented material database system

XR Lab

Berkeley, CA

3D Modeling Designer

June 2021 - July 2022

Curated user experience by conceptualizing and prototyping customizable avatar using 3D modeling software, Blender

XR Lab

Berkeley, CA

3D Modeling Designer

June 2021 - July 2022

Curated user experience by conceptualizing and prototyping customizable avatar using 3D modeling software, Blender

KNORTS

Los Angeles, CA

Freelance Knit Development

June 2020-July 2021

Created innovative knit structures and fabrics

SKILLS

SOFTWARE

Microsoft Suite

Adobe Suite

NedGraphics

Pointcarre

Weavepoint 7

STOLL M1+

Arduino

Raspberry Pi

EDUCATION

UC BERKELEY

Masters of Design | 2021 - 2022

Studio Officer Lead | 2022

BCNM Graduate Certificate | 2022

Distinguished Scholar Award | 2021

TEXTILES & DESIGN

Dobby & Jacquard loom programming

Knowledge of Weaving & Knit structures

Basic Physical Prototyping

Circuits
