## Experience

### **UX Researcher, Designer**

*UC Berkeley Haas*

02/2023–present

### **Product Design Intern**

*Autodesk*

05/2023–08/2023

### **UX Researcher**

*MustardTek*

02/2022–07/2022

### **Design Technologist**

*the OUTPUT*

05/2023–08/2023

## Awards

### **Grand Finalist, Winner of Future Constructors**

*2023 MIT Reality Hack*

### **Design Excellence Award**

*2022 UC Berkeley MDes*

### **Student Award**

*2021 Media Architecture Biennial*

## Education

### **University of California Berkeley**

MDes, HCI and UX Design

Distinguished Scholar

### **New York University**

B.S., Interactive Media Arts

Dean's List | DURF Recipient

## Bravo

Bring your colleaues closer during remote work

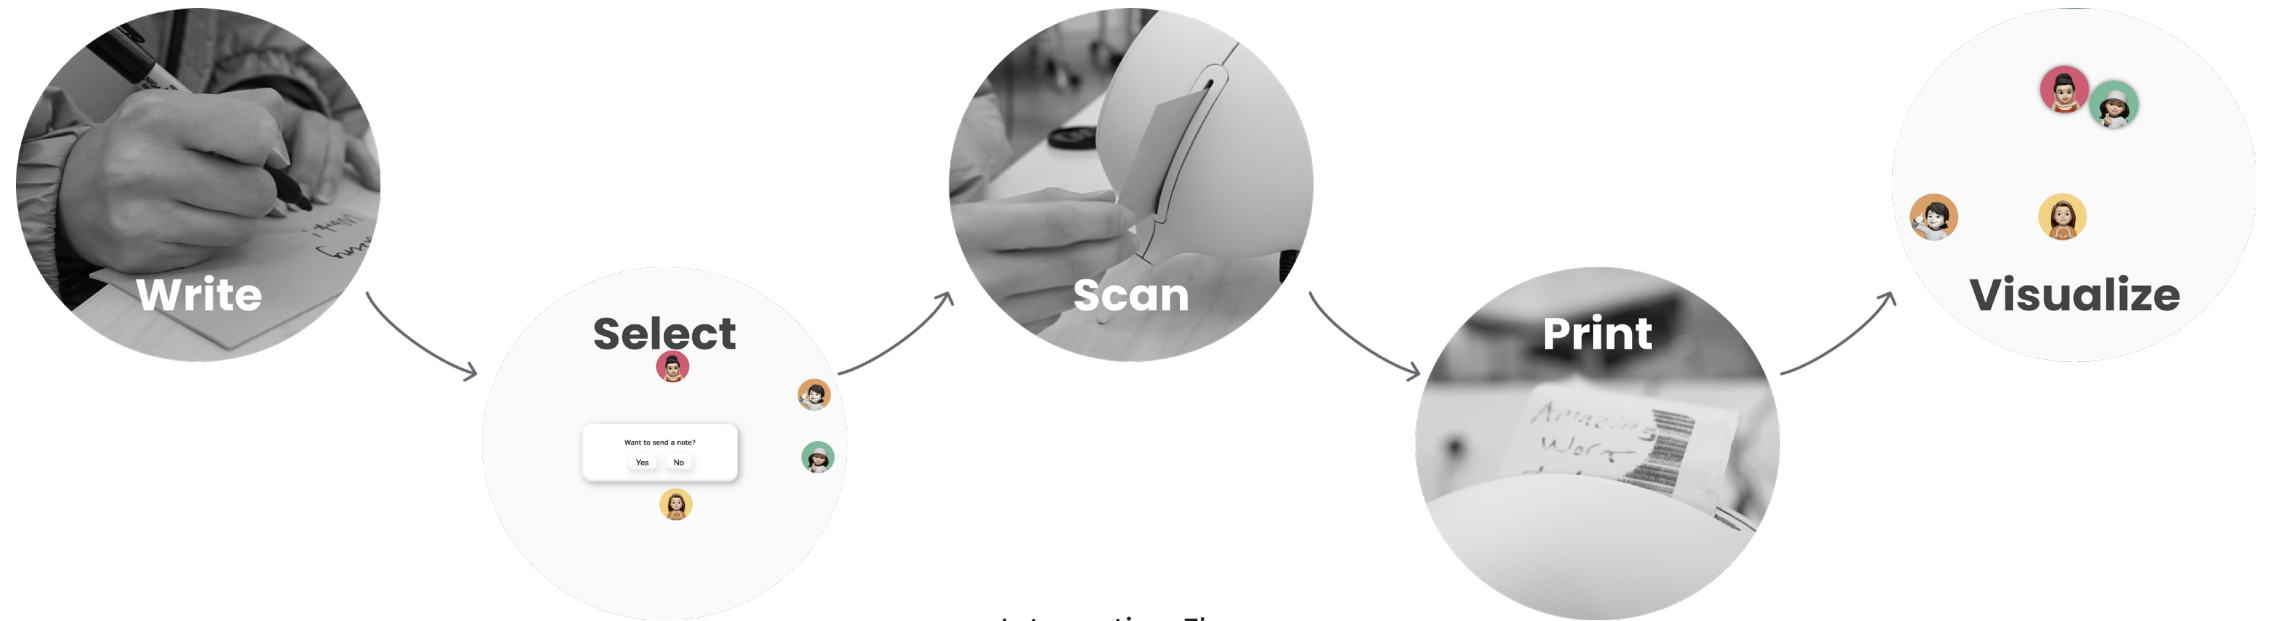

- # UX Research
- # IoT Product Design
- # Creative Computing

# Overview

# BRAVVO

Bravo is an IoT device designed for remote team members to have fun, engaging, real-time interactions with each other. It aims to foster the sense of bonding and belonging within the team in the virtual work space.

Interaction Flow

# BRAVO

## Research

We interviewed 6 people (age range 25-30 years old) from various industries about their remote work experience. Occupations include designer, software engineer, and program manager. Insights below led us to *Bravo*.

1. Wish for real-time engagement with colleagues
2. Lack team bonding or collaboration
3. Hope for personal contribution to be appreciated

## Plants Airline

A speculative design for plants migration  
in response to climate change

# Speculative Design  
# Soft Robotics  
# Physical Computing

# PLANTS

## Overview

The hardiness zone is predicted to move north as the temperature increases, leaving an inhabitable condition for local plants with limited mobility. To preserve the authenticity of a plant community, different species from one community need to be relocated together to reestablish their habitat.

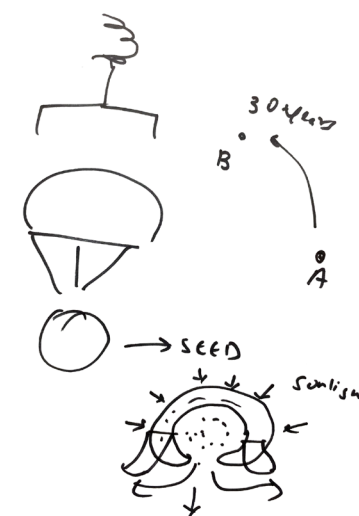

*Plants Airline* is a plants migration & seeding project that aims to protect biodiversity against the impact of climate change. Our seeding capsules designed with soft robotics can be easily carried by drones to target destinations that locate in places that are challenging for humans to reach. The seeding capsule preserves the seeds inside and help species with different temperature tolerance sprout at their fittest environmental conditions.

# PLANTS

## Prototype

The form factor of our design was inspired from the lotus. Seeds from different species can be securely contained inside a capsule structure when being carried by drones.

**AUTODESK**

**Your AutoCAD license is not valid. We can help.**

We have identified a nonvalid license associated with your AutoCAD software. To resolve this issue, purchase [at least a 1-year subscription](#) of AutoCAD.

**GET GENUINE AUTOCAD NOW**

**Get support from Autodesk**

We value our customers and make an effort to protect you from risk. Please answer the question below so we can better support you:

**What do you use Autodesk software for?**

- Work
- Education
- Personal use

**Close** **Next**

**Or, purchase AEC Collection**

With the collection, you get the automation. Select [at least two](#)

**A** CAD **C** C3D **R** RVT **N** MAN **I** IWX **D** DOC

**SAVE 25%**  
YOU CAN SAVE  
**\$1,260** /year

# AUTODESK

## Overview

During my summer internship at Autodesk, I was given the challenge to design the in-product messages (IPMs), chatbot product, and landing pages to help convert users from non-valid to genuine versions of Autodesk software.

This chatbot revamp will soon be launched in 10 major Autodesk products across 68 countries. Details are on NDA and cannot be shared publicly at the moment.

## If We Had a Choice

A speculative design series critiquing the future of Emotion AI

- # Speculative Design
- # Strategic Foresight
- # Multimedia Installation

# Overview

*If We Had a Choice* is a speculative design series that critiques the future of emotion AI. It is situated in year 2035, where society has transformed from the Internet of Things (IoT) to the Internet of Everything (IoE) due to mature and ubiquitous brain implant (BCI) technology. Individuals' everyday life is highly dependent on massive emotional data collection.

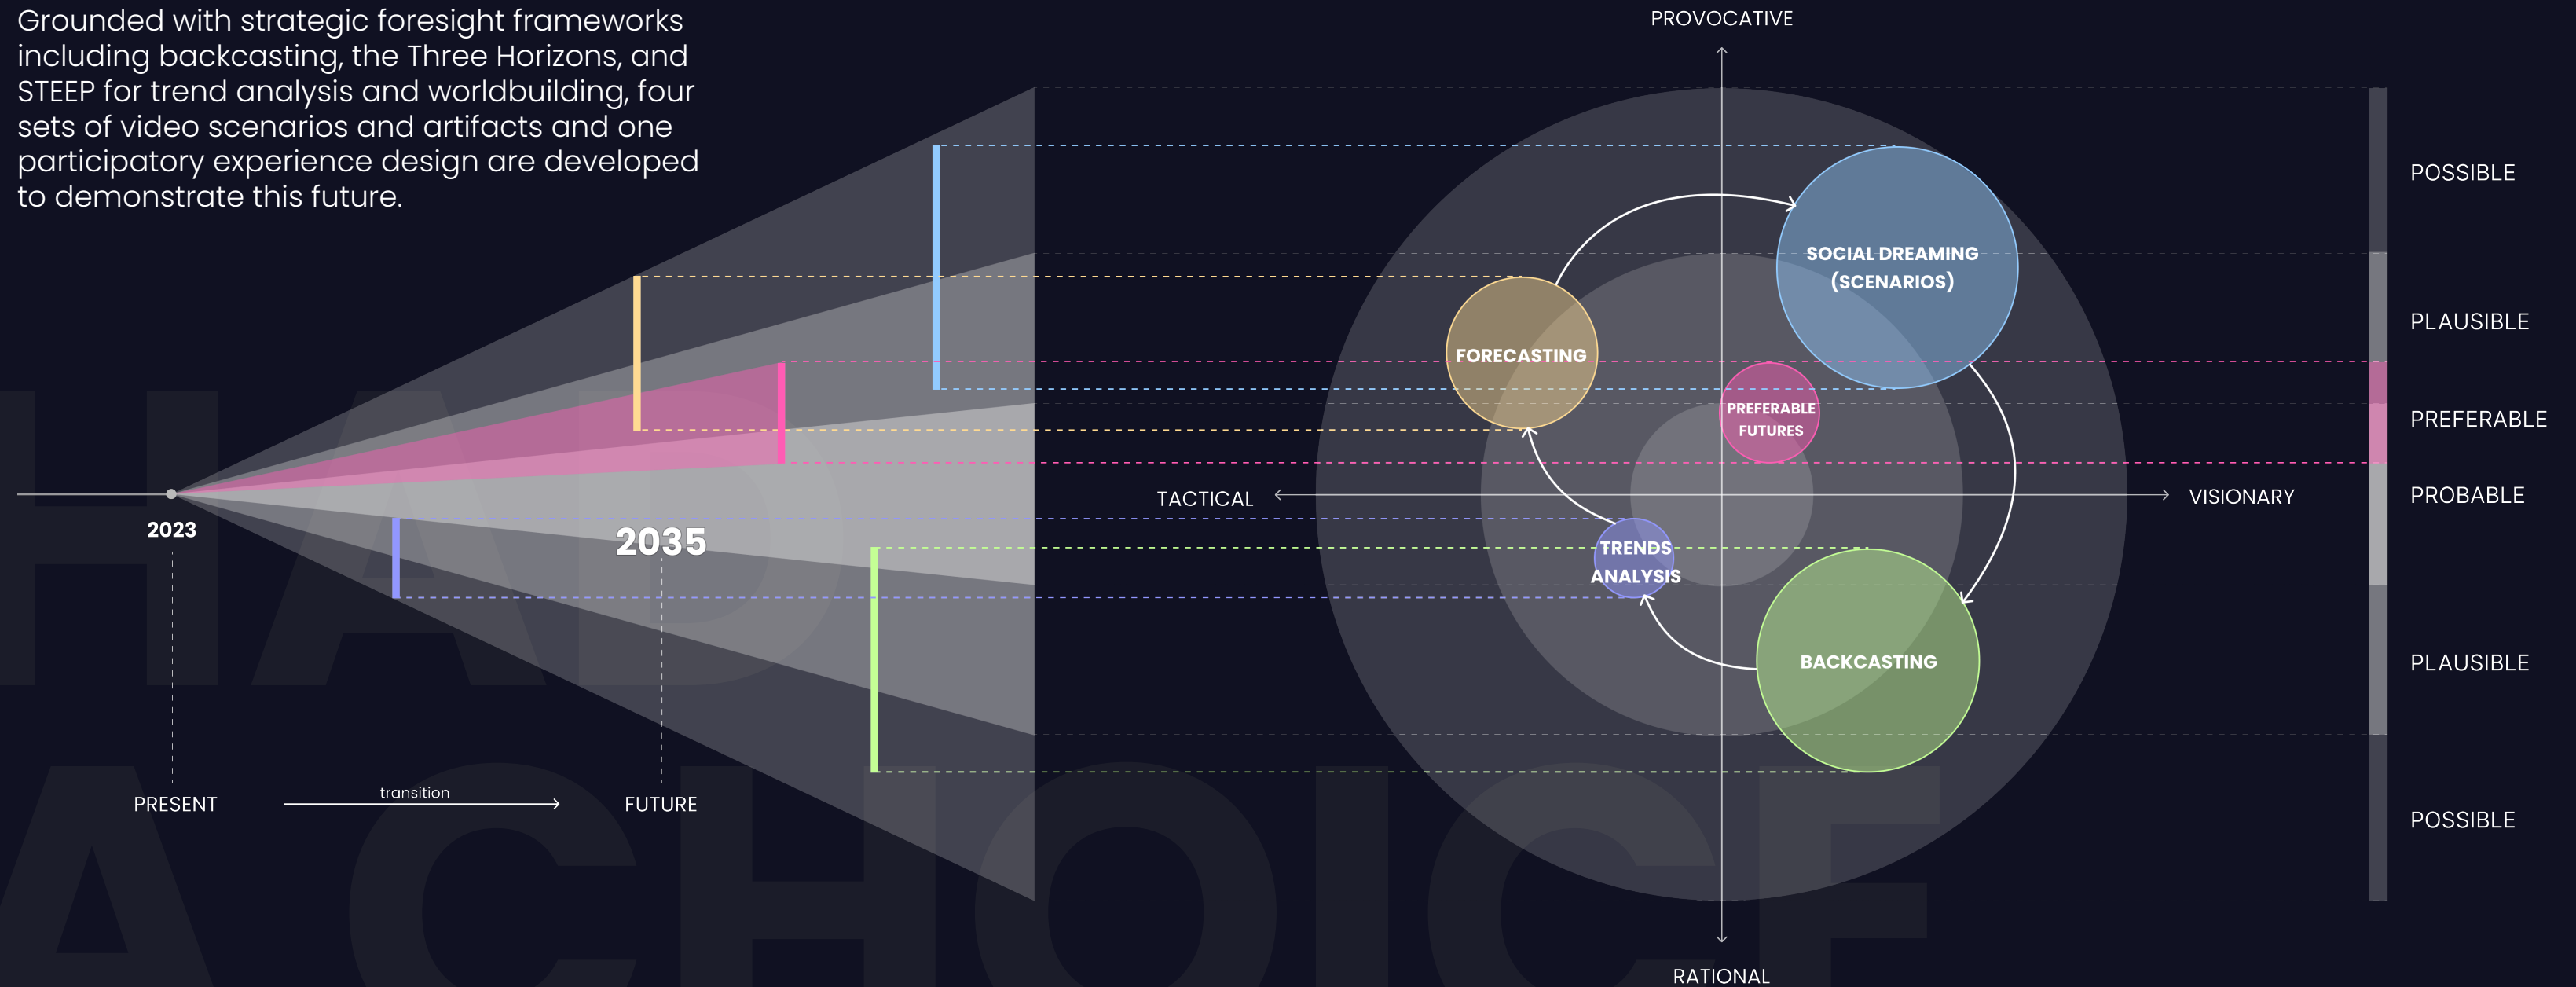

Resin-printed Wearable

Tap to Enable Emotional Data Sharing

# Methodologies

Grounded with strategic foresight frameworks including backcasting, the Three Horizons, and STEEP for trend analysis and worldbuilding, four sets of video scenarios and artifacts and one participatory experience design are developed to demonstrate this future.

# Emotional Data as Currency

This scenario demonstrates how emotional data is traded for better customized service, using coffee ordering in 2035 as an example. The representing artifact is an order receipt implying the monetary value of individuals' emotional data. The intention here is to speculate emotions as an alternative currency in an emotional data driven society and to evoke discussions around it.

Artifact: Order Receipt

# Emotion Analysis & Distrust

This scenario shows how people's reliability on emotion analysis from AI causes distrust in interpersonal relationships, aiming to criticize emotion AI misuse and potential harm brought to humanity in a data-driven society.

False Analysis

Raising Distrust
